

Sales Release Notification – FW version v4.12.2.2

Products Affected: AsteRx U-Fg

Septentrio is announcing the release of Firmware version 4.12.2.2 for AsteRx U-Fg.

This new software release is a maintenance release that optimizes the reception of L-band correction beams with 2400 baud rate resolving a rare occurring issue:

- The issue manifested when the ERSAT new beam was introduced as part of the Fugro Marinestar correction delivery.
- When present, this only impacts the accuracy of the PPP solution when the corrections are received from a beam with 24000 baud. No other positioning mode is affected.
- This new firmware will prevent the same issue from happening when the ARSAT beam (also 2400 baud rate) is introduced in December 2023.

To download the v4.12.2.2 software package and its release notes, please go to our support portal:

<https://www.septentrio.com/en/support>

This new software will be introduced during the following months for new purchase products. For additional information on Septentrio products and latest firmware, please contact your local sales representative (sales@septentrio.com) or the Customer Support Portal at <https://www.septentrio.com/en/support>.
