

Customer Notification– OSNMA changes

Product Affected: All Septentrio product supporting OSNMA

The OSNMA Public Observation Test Phase continues with multiple activities. During this phase, started in 2023, modifications to the ICD as well as improvements to the data distributions are being rolled out. Outages to the service and further live test for renewals of the keys are also being carried out. More information on the topic can be found [here](#).

While we try as best of our capabilities to follow the OSNMA evolution, some of the ongoing changes have an impact on Septentrio receivers and firmware updates will be required to regain a full OSNMA functionality.

Given the rapidly changing scenario, Septentrio products currently not be able to use OSNMA correctly until a future firmware update planed after OSNMA will reach the service declaration phase.

Our technical support department can be reached at customersupport.septentrio.com and will be happy to assist you if needed.

Best Regards,
François Freulon
